Profile

Final-year Bachelor's student of Open Informatics at the Faculty of Business and Economics, Mendel University in Brno. I have already completed most of my studies; I still need to complete one subject, professional internship, the state final examination and the defence of my Bachelor's thesis.

During my studies, I focused on embedded systems development and web application development. I have experience with web application development, design and implementation of REST APIs, working with databases, Docker, testing and version control using Git. In university projects, I have also worked with embedded/IoT and automation technologies such as Raspberry Pi, Arduino, LabVIEW, myRIO and B&R PLC.

I am looking for a professional internship or a junior/student IT position in software development, web application development, backend development, DevOps/cloud, testing, embedded/IoT or technical automation.

Education

Mendel University in Brno, Faculty of Business and Economics

Field of study: Open Informatics

09/2023 – present

Expected graduation: 01/2027

Specializations within the study programme:

- Embedded Systems Development
- Web Application Development

Technical Skills

Programming languages:

JavaScript, TypeScript, Python, Java, C++, MATLAB, SQL, Bash

Frontend:

HTML, CSS, JavaScript, TypeScript, Vue.js, React, Vite, design and development of web interfaces, working with REST APIs, JSON, XML, CRUD operations, form validation, authentication and authorization, JWT, file upload, pagination and data filtering

Backend:

Node.js, Express.js, Spring Boot, REST API design, routing, middleware, error handling, authentication and authorization, basics of WebSockets, basics of microservice architecture

Databases:

MySQL, PostgreSQL, SQLite, MongoDB, Firebase, Oracle Database

Testing:

Vitest, Cypress, JUnit, Mockito, MockMvc, unit tests, integration tests, end-to-end tests, basics of performance testing with JMeter

DevOps and tools:

Git, GitHub, GitLab, Bitbucket, Docker, Docker Compose, Swagger, Linux, terminal usage, npm, Gradle, IntelliJ IDEA, Figma

Embedded, IoT and automation:

Raspberry Pi, Arduino, myRIO, LabVIEW, basics of working with sensors and actuators, basics of PLC programming, B&R Automation Studio, basics of technological process control

Other knowledge:

Object-oriented programming, client-server architecture, algorithms and data structures, debugging, using AI tools during development

Projects

During my studies and independent work, I created several projects focused on web application development, backend logic, working with REST APIs, databases, testing and deployment using Docker.

Main projects include, for example:

- **Enterprise Applications – Board Game Recommendation Web Application**
Team university project focused on a backend application in Java Spring Boot, working with PostgreSQL, Docker, Liquibase, REST API, Keycloak, testing and performance testing.
- **MovieGuess**
Team frontend project focused on the development of a web application using Vue.js, Vite, Pinia, Firebase and Cypress.
- **BleskShop Marketplace Backend**
Independent backend project focused on the design of a marketplace system, REST API, authentication and database work.

More detailed project descriptions, technologies used, source code and README files are available on my GitHub profile:

Language Skills

Czech: B2

English: A2–B1

Russian: native speaker

Personal Strengths

- hardworking
- independent
- responsible approach
- ability to learn quickly
- goal-oriented
- focus on quality and careful implementation

Additional Information

- looking for a professional internship or a junior/student IT position
- available to start immediately
- prefer a part-time position or long-term student cooperation
- able to work more hours during the summer
- during the semester, I need to coordinate work with my study schedule
- possibility of recognizing the work as professional internship within my studies
